

EchoLens Video Analysis Report

General Information

Analyzed on: April 26, 2025 at 02:04 AM

Video Duration: 2.50 seconds

Analysis Results

Predicted Event: Explosion

Confidence: 18.15%

Event Summary: The surveillance video mistakenly classifies various screenshots of laptop screens displaying software loading, error, or progress indicators as "explosions." The actual event is a series of non-explosive software-related events on a laptop.
